RE: Renegade Parts Washer (RPW)

Dear Ms Kokenzie:

Based upon the data provided regarding disposal of wastewater from the Renegade Parts Washer (RPW) along with information contained in the MSDS would lead me to believe that discharge from the RPW would meet the limitations as required in the City of Dubuque's Sewer Use Ordinance. Limitations may be more stringent in the event this process is used in an Industry subject to USEPA Categorical Standards.

The Industrial user is responsible for notifying the Water Pollution Control Department (WPCP) of the City of Dubuque if it believes it may be subject to categorical standards and an evaluation would be made as whether an Industrial Pretreatment Permit is required for discharge.

Again I do not see a problem in terms of the discharge of material from the RPW but each industrial client's need for a discharge permit is determined on a case by case basis depending upon the needs of the WPCP and whether the industry is determined to be a Categorical Industrial User.

If you need further information or clarification please feel free to contact me at 563-589-4176.

Sincerely,

Jonathan R. Brown  
Manager City of Dubuque WPCP
