RE: Disposal of Parts Washer Solutions

Dear Ms. Wilcox:

The disposal of the washing solutions from the parts washers will be allowed to the City of Rapid City's sanitary sewer system under the following conditions.

1. The washers will be properly maintained as required by the manufacturer's specifications. (Filter changes, solution strengths, etc.)
2. Prior to disposal of the solution, all floating materials will be removed from the surface. This floating material will be properly disposed.
3. The clarified liquids will be decanted off for disposal.
4. Any sediments in the sump will be removed and properly disposed.
5. The decanted liquids will be discharged through the sand/oil interceptor prior to entry into the city's sanitary sewer system.

If any conditions develop in the future that may be attributed to these discharges, additional requirements may be imposed on these discharges.

If you have any questions, or need additional information, please contact my office at (605) 394-4163.

Sincerely,

Chuck Larson
Industrial Waste Supervisor
